

**Due date 31.10.17 – 23:55 Do not forget to name your *.vpp file with your student ID.
For example, 01010001111.vpp**

Model the scenario using Use - Case diagrams. Since we don't have real stake holders here, you are free to fill in details you think is sensible for this scenario.

"You will develop a browser - based training system to help people prepare for an exam. A user can request a quiz for the system. Users have three different types of difficulties Beginner, Intermediate, Advanced. The system picks a set of questions from its database regarding the preferred difficulty(which are Beginner, Intermediate and Advanced) level taken from the user, and composes them together to make a quiz. When the exam finishes, it rates the user's answers, and gives hints if the user requests it. If user does not satisfy with their score, they may request a re-evaluation which is re-evaluated by a supervisor. Re-evaluated scores are also reported by supervisor. Questions, hints and the difficulty of the questions will be provided by the tutors. And also supervisors must certify questions to make sure they are not too trivial, and irrelevant."
