

**Due date 09.12.2017 – 23:55**

**Upload a single visual paradigm project(.vpp) file named with your student ID.  
For example, 01010001111.vpp.**

“You are planning to develop an online booking system, “Fast - Ticket”, for performance centers. The system will be used by two types of customers: regular and VIP. All customers can check session dates, show times, prices and addresses of the performance centers. Personal information of the customers will be stored in a class named as “Customer”. It will include customer name, surname, address, telephone number, reservations, history and etc. Both customers can buy as much ticket as they want. The total number of available seats, sessions, and addresses of performance centers will be associated in their own respective separate classes.”

**For the given scenario, draw a design class diagram (first draw an analysis diagram).**
